

Print machinery

Efficiently clean printing machinery in place without chemicals.

Dry ice cleaning quickly cleans printing machinery parts with little to no disassembly or down time. The process easily and accurately cleans burnished ink, heavy grease and caked on paper dust without chemicals or damage to sensitive and expensive components.

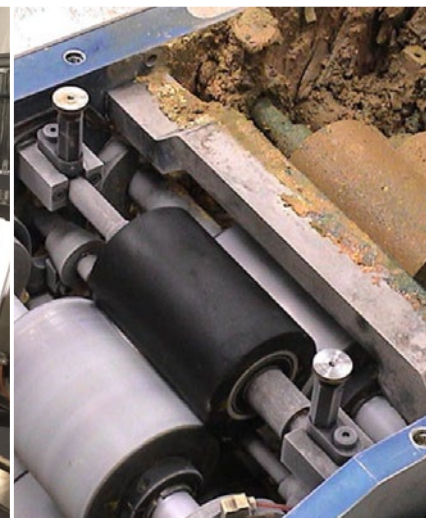

Traditional cleaning and deflating methods involve tedious and ineffective manual processing and the use of cleaning chemicals and hand tools.

Applications

- Print rollers
- Drums
- Feeder units
- Gear and deck guides
- Grippers
- Ink trays
- Letterpresses
- Vent slots and electronic components.

Key benefits

- Improve product quality
- Reduced scrap
- Reduced production downtime
- Reduced cleaning time and labour costs
- Clean in place with no disassembly
- Non-abrasive
- No damage to product or equipment.
